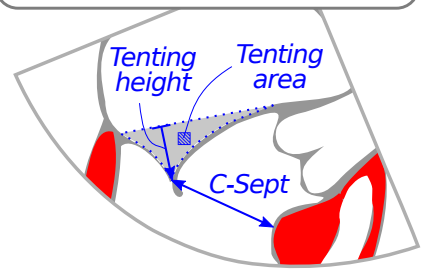
2D measures can also be made in 3D MPR



◐ Pre-surgical assessment

1. Confirm **diagnosis** & **severity**
2. Identify **mechanism** & **viability of repair** (if planned)
3. LV **morphology** and **function**? (EF; SWMA? Consider LV strain)
4. Associated **AV pathology**?
5. **LA dilation** or **LAA thrombus**?

◑ Post-surgical assessment

1. **Mean gradient**
2. Residual **MR** or paravalvular **leak**?
3. **SAM** or **LVOTO**?
4. New **AI**?
5. Injury to **bicaval cannulation sites**?
6. New **SWMA** suggesting **circumflex** injury?
